EDUCATION

University of Texas at Arlington (GPA: 3.75/4)

Master of Science, Computer Science

Jan 2024 – Dec 2025

Arlington, TX

Visvesvaraya Technological University (GPA: 3.8/4)

Bachelor of Engineering, Computer Science

Aug 2019 – Jul 2023

Bengaluru, KA

EXPERIENCE

Software Engineer

DoJoGa

Apr 2026 – Present

Remote, US

- Ship product features end to end across a Next.js and TypeScript frontend and Spring Boot and Node.js services on PostgreSQL, owning API contracts, data models, and responsive UI in a small team.
- Build blockchain components with Solidity smart contracts and ethers.js, integrating custodial and non custodial wallet flows into production user journeys and reviewing on chain logic for safety.

Associate Software Engineer

Torry Harris Integration Solutions

Aug 2023 – Dec 2023

Bengaluru, KA

- Shipped full stack features for TalenTrack, an internal skillset platform serving 500 plus users, owning OTP authentication and role based access control with Spring Security, JWT, and Spring Data JPA on MySQL.
- Designed 15 plus REST APIs and normalized relational schemas to 3NF, cutting average query response time by 40 percent through indexed joins and eager loading strategies.
- Containerized services with Docker and deployed to Kubernetes using Helm for zero downtime rolling updates, cutting deploy time from 20 minutes to 4 minutes; wrote 80 plus JUnit and Mockito tests at 75 percent coverage.

Software Developer

Sal Biosciences Pvt Ltd

Nov 2022 – Jul 2023

Bengaluru, KA

- Built internal full stack web applications with Java, Spring Boot, and JavaScript, designing REST APIs and responsive views used daily by research and business teams.
- Designed relational schemas and data ingestion scripts to consolidate operational datasets, authored 40 plus unit and integration tests, and supported hybrid on premise and cloud deployments.

PROJECTS

MappedIn | [GitHub](#) | *Java 25, Spring Boot 4, PostgreSQL 18, PostGIS, Next.js 16, React 19, MapLibre, Docker* Aug 2026 – Sep 2026

- Built a full stack travel mapping platform rendering saved place lists on a rotatable 3D globe, with journey arcs in visit order, per leg distances, and country and continent coverage statistics.
- Computed geography in PostgreSQL 18 and PostGIS rather than the browser, using ST_DWithin proximity search on a GIST index verified through EXPLAIN ANALYZE, ST_Segmentize geodesic arcs, and time ordered UUIDv7 keys.
- Hand wrote the Spring Security filter chain and JWT filter, enforced ownership in repository signatures to prevent ID enumeration, and shipped 16 endpoints with 83 tests at 89 percent coverage on real PostGIS via Testcontainers.

ConvergeAI | [GitHub](#) | *Java 21, Spring Boot 3, PostgreSQL, pgvector, LangChain4j, React 18, TypeScript* Jun 2026 – Jul 2026

- Built a document grounded multi agent RAG platform where three independent models answer, critique, and revise before a consensus engine returns one synthesized answer with a confidence score.
- Indexed documents with Tika parsing, recursive chunking, and in process ONNX embeddings in PostgreSQL pgvector under an HNSW cosine index; ran agents in parallel on Java virtual threads with multi provider failover.

AgriPulse HMI | [GitHub](#) | *React Native, TypeScript, Node.js, Express, Socket.IO, PostgreSQL, Prisma, Java* Apr 2026 – May 2026

- Built a real time monitoring and control app with a React Native operator UI and a Node.js and Express backend, using Socket.IO pub/sub across separate device and operator namespaces for live telemetry and pump control.
- Modeled a seven table PostgreSQL schema with Prisma for time series telemetry, enforced server authoritative safety interlocks, and wrote a Java Android native module over the bridge for OS level network diagnostics.

ChainVote | [Live Demo](#) | [GitHub](#) | *Solidity, Hardhat, Chai, Next.js 14, Polygon, MetaMask*

Feb 2026 – Mar 2026

- Deployed a privacy preserving voting dApp on Polygon Amoy with Solidity contracts, a Next.js 14 frontend, and MetaMask through ethers.js, enforcing double vote prevention and election windows on chain.

FindSpace | [Live Demo](#) | [GitHub](#) | *Next.js 14, TypeScript, Spring Boot 3.2, PostgreSQL, JWT, Docker*

Jul 2025 – Oct 2025

- Architected and deployed a full stack rental marketplace with a Next.js 14 and Tailwind frontend and a Spring Boot 3.2 backend on PostgreSQL, using JWT stateless auth, role based access, and BCrypt hashing.
- Built 10 plus REST endpoints for registration, listing CRUD with soft delete, threaded messaging, and notifications, then shipped CI/CD on Vercel, a Dockerized Render backend, and Neon Postgres with auto deploy on Git push.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, Solidity, C++, C, HTML, CSS

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Node.js, Express.js, REST APIs, Microservices, JWT, OAuth2, Socket.IO

Frontend: React, Next.js, React Native, Redux, Zustand, TanStack Query, Tailwind CSS, shadcn/ui, MapLibre

Databases: PostgreSQL, PostGIS, pgvector, MySQL, MongoDB, Redis, Firebase, Prisma, Flyway

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Docker Compose, Kubernetes, Helm, CI/CD, GitHub Actions, Maven, Vercel, Render, Neon

Testing & Tools: JUnit, Mockito, Testcontainers, JaCoCo, Vitest, Jest, Chai, Hardhat, Postman, k6, Git, JIRA, Agile/Scrum

Concepts: Data Structures & Algorithms, System Design, Distributed Systems, RAG and Vector Search, Spatial Data, OOP, SDLC
